

You've standardized on Microsoft Azure.
Now maximize its value.

CLOUD STRATEGY

Centric's Azure experts work with you to develop strategies that can fully leverage the depth and breadth of Azure capabilities – in the cloud, off the shelf, and across your entire enterprise.

SET UP AND INSTALLATION

Proper set-up, configuration and installation are essential to accelerate uptime and optimize performance. Centric's Azure engineering experts help provide a stable environment that will scale efficiently and reduce maintenance costs over the long run.

TESTING

Before any cloud deployment process gets released, Centric creates repeatable processes and can implement automated testing to deliver high levels of accuracy and stability, ensuring full-scale deployment with confidence.

DEVOPS

With vast expertise in mission-critical environments, Centric's Azure experts closely manage and monitor the production process, safeguarding security, accelerating uptime, and optimizing performance across your entire enterprise.

CUSTOM INTEGRATION

No two systems are the same. And rarely do they work together without some level of customization. Our Azure-certified professionals create custom solutions, web applications and APIs to ensure interoperability among your data, applications, systems and tools.

ANALYTICS

Measuring inputs, throughputs and outputs is essential for transforming hundreds of terabytes of data to predict actions of millions of customers. Establishing proper analytics also ensures the ability to view your data in real-time, allowing you to detect and diagnose anomalies before they become problems.

SCALE

As the plethora of apps, devices and web tools continues to escalate, companies must identify new ways to connect and engage at unprecedented scale. Centric's Azure engineers have extensive experience hyper-scaling solutions up to a billion transactions a month.
